DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-6, 13-24 are rejected under 35 U.S.C. 102(a) as being anticipated by WO 2003055841 published 7-2003.

The WO document teaches a polymer comprising adamantly methacrylates, adamantly acrylates and adamantly trifluoromethane acrylates having a hydrophilic hydroxyl group in the ring (page ⁵ 4) and rings which have complete fluoro substitution for the hydrogen atoms of the ring (page ⁴ 5). This art is used to reject claim 17-24 because the resist and dissolution inhibitor only read on the polymer.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higuchi et al. publication no. US 2003/0054117 2004/0071998 A1 in view of WO 03/055841 cited above.

In section 25 Higuchi teaches a paint comprising a thermoplastic vinyl resin comprising monomers c-1, c-2 and c-3. C-1 is a vinyl monomer and c-2 may be an adamantly acrylate.

Higuchi does not teach the adamantly acrylate is a perfluoroadamantly ring.

It would have been obvious to one of ordinary skill in the art to use the perfluoroadamantly acrylate monomer as c-2 in the invention of Higuchi with a

reasonable expectation of obtaining a paint having improved transparency because the Derwent abstract of the WO publication teaches these monomer⁵ may be used in a paint.

Allowable Subject Matter

5. Claims 7,9,10,11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The monomer of claim 1 is not a vinyl ether, the polymer does not have a second monomer with an acid dissociable group or an acid insoluble group or a second monomer derived from a (me)acrylic ester.
